## CAREER OBJECTIVE

---

Seeking a Junior Full Stack Developer position to bring hands-on MERN stack experience — REST API design, JWT & OAuth authentication, and production deployment — to a collaborative team where I can contribute from day one and grow into harder backend and frontend challenges.

## TECHNICAL SKILLS

---

**Frontend:** HTML5, CSS3, JavaScript (ES6+), React.js, Next.js (App Router), Tailwind CSS

**Backend:** Node.js, Express.js, REST API, JWT Auth, Google OAuth, BetterAuth

**Database:** MongoDB

**Tools & Platforms:** Git, GitHub, VS Code, Vercel, Netlify, Cloudflare Pages

## PROJECTS

---

**IdeaVault** — Full Stack MERN Application — [Live Site](#) | [Client Repo](#) | [Server Repo](#)

**Stack:** React.js, Node.js, Express.js, MongoDB, JWT, Google OAuth

A collaborative startup idea platform where users publish, explore, like, and comment on ideas. Built solo with full client-server separation and deployed to production.

- Designed and implemented a RESTful API with JWT-based stateless authentication and Google OAuth 2.0 login, including protected route middleware and token refresh logic on the Express.js backend
- Built a nested comment system (create, edit, delete) and a like/unlike toggle backed by MongoDB document updates, with optimistic UI state management on the React frontend
- Implemented server-side search, filter, and sort query parameters on the API, consumed via dynamic React state to enable real-time idea discovery without page reloads

**SunCart** — Modern eCommerce Web Application — [Live Site](#) | [GitHub Repo](#)

**Stack:** Next.js (App Router), Tailwind CSS, BetterAuth, MongoDB

An eCommerce platform with authentication-gated product pages and full user profile management.

- Integrated BetterAuth for session-based authentication with protected routes, MongoDB user persistence, and profile management endpoints
- Architected the application using Next.js App Router with clear server/client component boundaries — fetching product and user data server-side to reduce client bundle size and improve initial load performance
- Built the product catalogue and cart UI as client components, managing add-to-cart and quantity control via local state without full-page navigation

## EXPERIENCE

---

### Independent Web Developer — Blogger Template Creator

Self-Employed | [pandatemplates.com](http://pandatemplates.com) | 2022 – Present

- Developed and published 4 Blogger templates on [pandatemplates.com](http://pandatemplates.com), managing the full product lifecycle from design and development through to publishing and user support
- Handled end-user feedback and iterated on live templates used by hundreds of active users

## EDUCATION

---

### B.Sc. (Honours) in Mathematics

National University, Bangladesh | Currently 4th Year | Expected Graduation: 2027

## CERTIFICATIONS & TRAINING

---

### Full Stack Web Development — Programming Hero

In progress | Expected completion: June 2026

## LANGUAGES

---

Bengali (Native) | English (Conversational)
